

About 3di - 'Innovative Product Design and Development'

Bringing together a combination of over 30 years product design experience, with a forward thinking development process and a desire to create and deliver successful product design solutions for clients. By success we mean products that sell and look great. There are many ways the manufacturing industry can benefit greatly from using innovative product designers. Benefits include; the redesigning of existing products, the reduction of manufacturing overheads, creation of innovative new solutions with important intellectual properties and or a combination of all three.

Our services fall into 4 main categories;

Creative design - Producing a range of highly creative and exciting sketches as well as CAD rendered images.

Technical innovation - Using Pro Engineer we offer 3D CAD/ detail design of full assemblies, material selection guidance and FEA (Finite Element Analysis).

Prototypes - With full workshop facilities, we can provide handmade models, Z450 3D printed models, CNC fabrications, metal and wood prototypes.

Project management - Manage the full product development process from concept to production.
